

EXPEDITED REVIEW: THE IRB APPLICATION

(Please type)

Principal Investigator

Title of Project

Please indicate by checking the appropriate space below the category or categories into which you believe your project falls:

- 1. Collection of hair and nail clippings in a non-disfiguring manner, deciduous teeth; and permanent teeth if patient care indicates a need for extraction.
- 2. Collection of excreta and external secretions including sweat, uncannulated saliva, placenta removed at delivery, and amniotic fluid at the time of rupture of the membrane prior to or during labor.
- 3. Recording of data from subjects 18 years of age or older using noninvasive procedures routinely employed in research or clinical practice. This includes the use of physical sensors that are applied either to the surface of the body or at a distance and do not involve input of matter or significant amounts of energy into the subject or an invasion of the subject's privacy. It also includes such procedures as weighing, testing sensory acuity, electrocardiography, electroencephalography, thermography, detection of naturally occurring radioactivity, diagnostic echography, and electroretinography. It does not include exposure to electromagnetic radiation outside the visible range for (for example x-rays, microwaves).
- 4. Collection of blood samples by venipuncture, in amounts not exceeding 450 milliliters in an eight-week period and no more often than two times per week, from subjects 18 years of age or older and who are in good health and not pregnant.
- 5. Collection of both supra- and subgingival dental plaque and calculus, provided the procedure is not more invasive than routine prophylactic scaling of the teeth and the process is accomplished in accordance with accepted prophylactic techniques.
- 6. Voice recordings made for research purposes such as investigations of speech defects or subject's responses to questioning.
- 7. Moderate exercise by healthy volunteers.

- __8. The study of existing data, documents, records, pathological specimens, or diagnostic specimens.
- __9. Research on individual or group behavior or characteristics of individuals, such as studies of perception, cognition, game theory, or test development, where the investigator does not manipulate subjects' behavior and the research will not involve stress to the subjects. Research involving sensitive matters such as sexual or political behavior may require full review. Expedited review is not appropriate if the subjects' responses, if known outside the research, could place them at risk of civil or criminal liability or damage their financial standing or employability.
- __10. Research on drugs or devices for which an investigational new drug exemption or an investigational device exemption is not required. NOTE: The Board may request full review if in their opinion the subject will be at greater than minimal risk.
