

ITAC End of Year Summary for 2003-2004

We met 6 times during the 2003-2004 year. Our Fall meetings focused on projects that might be funded by the Student Technology Fees. Each proposal was considered by the committee and discussed at length. The committee recommended funding for a number of projects, including new computers for student computer labs in the dorms, classroom technology for two Biology labs, 20 new computers for the SOE computer lab, and a special software platform for Computer Science majors. A new application form was devised to streamline and standardize the procedure for requesting these funds.

The committee also heard from Lovely Lewis, Frank Spaniol, and Lynda Lee Purvis about the status of various technology projects that pertain to instruction.
