

THE PERSPECTIVE OF "BIE-MODERN":

THE IMPACT AND RECONSTRUCTION OF VIRTUAL REALITY ON DAILY LIFE

Jian Shengyu, Professor of Yangzhou University, Research Field: Art Aesthetics

Abstract: The theoretical significance of "Bie-modern" is not limited to the analysis of specific "spatialization of time" and other academic issues, but also to think and criticize the problems of the times that exist in reality with a humanistic spirit. Virtual reality is a new technological product that human beings have emerged in the process of expanding their own field of existence. From traditional video games to online games to "Metaverse", human beings have made virtual reality more refined and comprehensive. The virtual reality provided by technological entertainment has caused problems such as addictive dependence and evasion of reality in some people. "Metaverse", or the so-called "virtual reality Internet", as a representative of the next generation of Internet, contains both risks and opportunities. It is necessary for us to use the perspective of "Bie-modern" theory to examine, criticize and care about the human situation in the era of artificial intelligence.

Key words: "Bie-modern", virtual reality, online games, Metaverse, the real Internet,
