

Content Document Viewer

You can view PowerPoint slides, Word documents, .rtf, .pdf files in the new **document viewer** on the topic's page:

NOTE: However, if you uploaded a document that has **clickable links**, they will currently not be clickable when students view the file in the Content document viewer. The links are visible, but not clickable.

A workaround is to put a link in the description of the content topic with instructions to open the link(s) in other windows prior to opening the content topic. ITS does not have a timetable for when this will be fixed.
